

Project Build Summary – Current Status

Project

Human-in-the-Loop Agentic AI Job Search Copilot

Current Development Stage

Sprint 1 – Foundation Services

Completed Setup

- Project opened in VS Code.
- Virtual environment created and activated.
- PowerShell selected as the working terminal.
- Required dependencies installed from `requirements.txt`.
- Streamlit successfully launched using:

```
python -m streamlit run app.py
```

Folder Structure Finalized

The project now follows a service-oriented architecture:

```
src/  
├─ agents/  
├─ graph/  
├─ llm/  
├─ services/  
├─ generators/  
├─ models/  
├─ prompts/  
├─ tools/  
├─ ui/  
└─ utils/
```

Completed Services

1. ConfigService

File:

```
src/services/config_service.py
```

Purpose:

- Loads `.env`
- Reads OpenAI/Ollama settings
- Reads embedding provider settings
- Creates required project folders
- Validates required configuration

Tested through Streamlit.

Current displayed values:

```
LLM Provider: openai
Embedding Provider: openai
OpenAI Model: gpt-4o-mini
Ollama Model: llama3.1:8b
```

2. LoggerService

File:

```
src/services/logger_service.py
```

Purpose:

- Creates centralized logger
- Writes logs to `logs/app.log`
- Supports agent action logging
- Logs app startup and configuration status

Tested through Streamlit.

Temporary `app.py` Purpose

Current `app.py` is being used as a temporary test harness.

It currently tests:

- ConfigService loading
- Directory creation
- Configuration validation
- LoggerService initialization

Current Streamlit output confirms:

```
ConfigService loaded successfully.
LoggerService loaded successfully.
```

Important Fixes Done

- `.env` loading fixed.
- `ConfigService` import issue fixed by saving files properly.
- `data/cvs`, `data/profiles`, and related paths corrected as folders instead of files.
- Streamlit successfully runs on:

```
http://localhost:8501
```

Current Sprint Progress

- ✓ Sprint 1.1 - `ConfigService` completed
- ✓ Sprint 1.2 - `LoggerService` completed
- 🕒 Sprint 1.3 - `StorageService` next
- 🕒 Sprint 1.4 - LLM Service pending
- 🕒 Sprint 1.5 - Embedding Service pending
- 🕒 Sprint 1.6 - Chroma Service pending

Next Step

Continue with:

```
src/services/storage_service.py
```

`StorageService` will handle:

- Saving candidate profiles
- Loading candidate profiles
- Saving job descriptions
- Loading jobs
- Saving applications
- Loading application tracker data
- Saving test scenarios

The file will remain named:

```
storage_service.py
```

No renaming to `data_service.py` is needed.
